Question 2 => Pseudocode

```
Start
Print "Enter the upper limit (n):"
Read n
Print "Amicable pairs up to" + n + ":"
count = 0

For a = 1 to n
    b = sumofproperdivisors(a)
    If b > a AND b <= n then
        If sumofProperDivisors(b) == a then
            Print "(" + a + ", " + b + ")"
            count = count + 1
        End If
    End If
End For

Print "Total pair: " + count
END

Function to calculate the sum of proper divisors
Function sumofproperdivisor(num)
    sum = 0
    For i = 1 to num/2
        If num MOD i == 0 then
            sum = sum + i
        End if
    End for
    Return sum
End function
```
